SOLID TECH

Loudspeaker stands

Solid Tech loudspeaker stands materials have been selected with outmost care to combine in harmony stability and aesthetical design. The stands have the same design pattern as the one used in Solid Tech's rack systems. Six different models are available, each with a distinct design. Filling the stands with sand will improve performance as the sand causes stability that increases the low level sound dynamics. The stands come with spikes in the bottom to avoid any floor resonance. All models except model 6 and 7 have a cable handling system integrated in the pillars.

Loudspeaker stands

Model 3

The classical model 3 is based on a bottom plate that uphold two anodized aluminum pillars.

Available in white or black bottom and with pillars in silver, black or copper.

Tech details:
- Height silver and black: 620 and 720mm
- Height copper: 620 and 670mm
- Top plate: 230x170mm

Model 4

Model 4 is suitable for larger speakers having a bigger bottom plate in concrete that uphold four pillars with a large top plate. Pillars are available in silver, black and copper.

Tech details:
- Height silver and black: 620 and 720mm
- Height copper: 620 and 670mm
- Top plate: 306x240mm

Model 5
